

Memory Match Game - README

1. Project Overview

Memory Match Game is a Flutter-based mobile application where users flip cards to find matching image pairs. The game tracks the number of moves and allows users to restart the game at any time.

2. Features

- Card flipping functionality
- Matching logic for image pairs
- Move counter
- Restart game button
- Random card shuffle
- Responsive Flutter UI
- Android Emulator support

3. Technologies Used

- Flutter
- Dart
- Android Studio
- Android Emulator

4. Project Structure

```
lib/  
├── models/  
│   └── card_model.dart  
├── screens/  
│   └── home_screen.dart  
├── utils/  
│   └── game_logic.dart  
├── widgets/  
│   └── memory_card.dart  
└── main.dart  
  
assets/  
└── images/
```

5. How to Run the Project

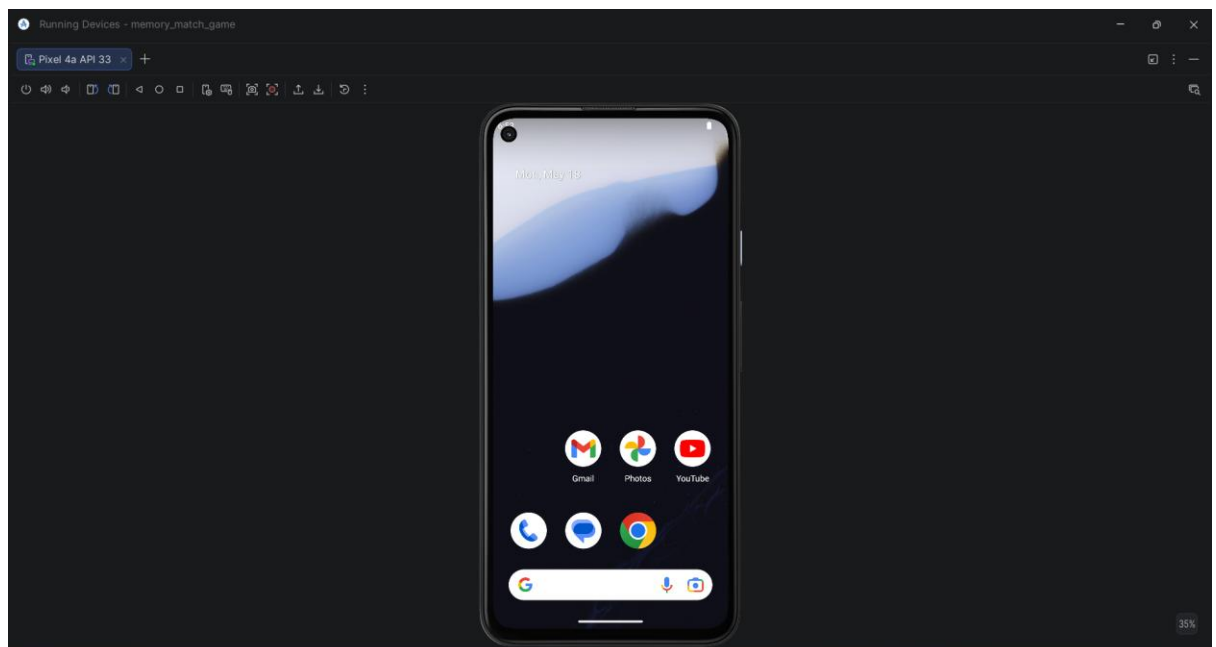

1. Install Flutter SDK and Android Studio
2. Enable Flutter and Dart plugins
3. Open the project in Android Studio

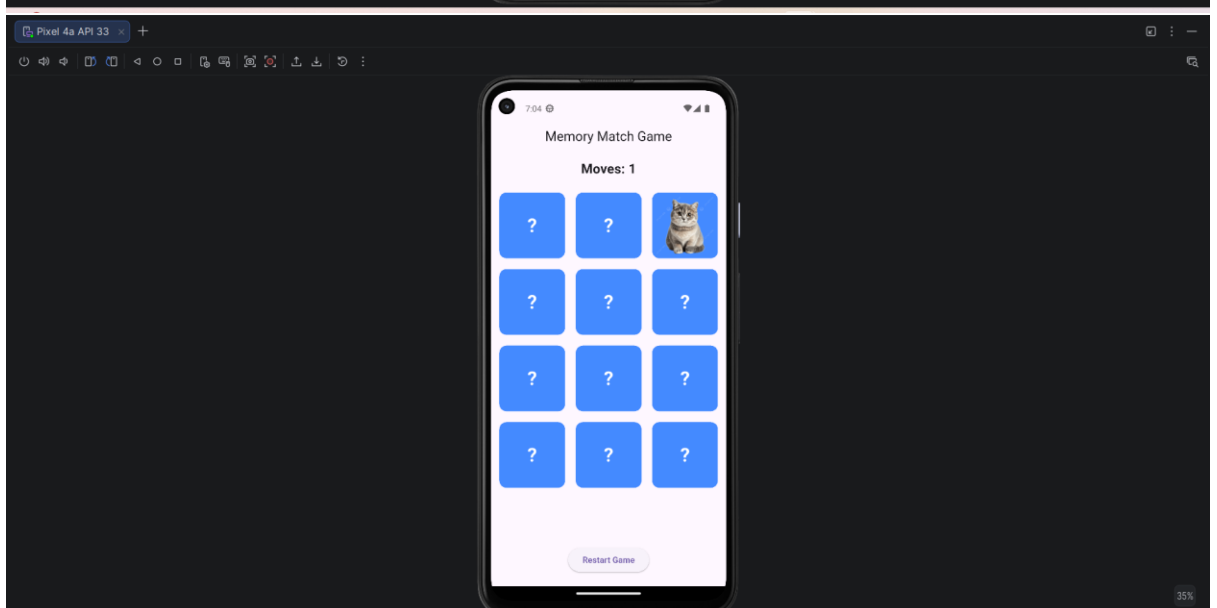

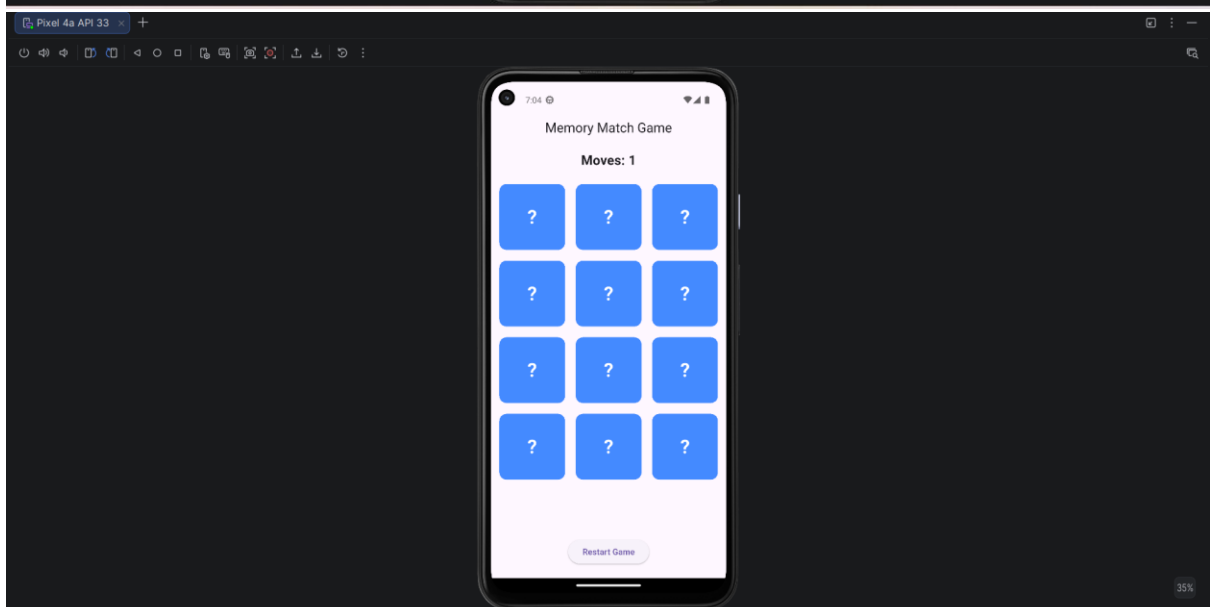

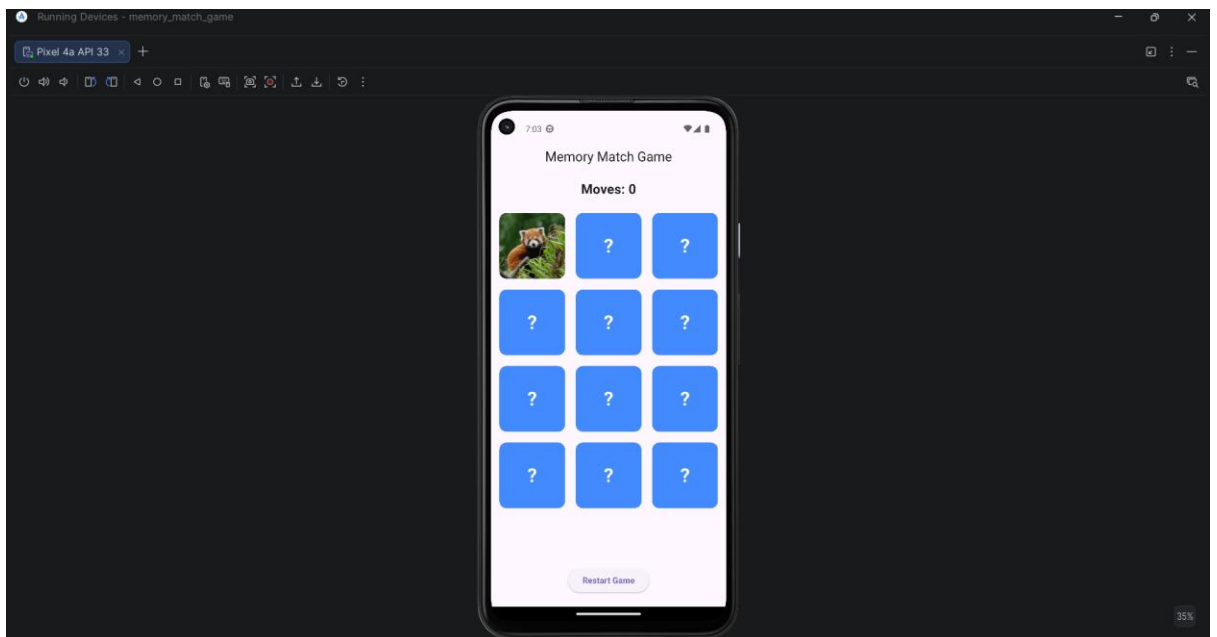

4. Run flutter pub get
5. Start Android Emulator
6. Run flutter run

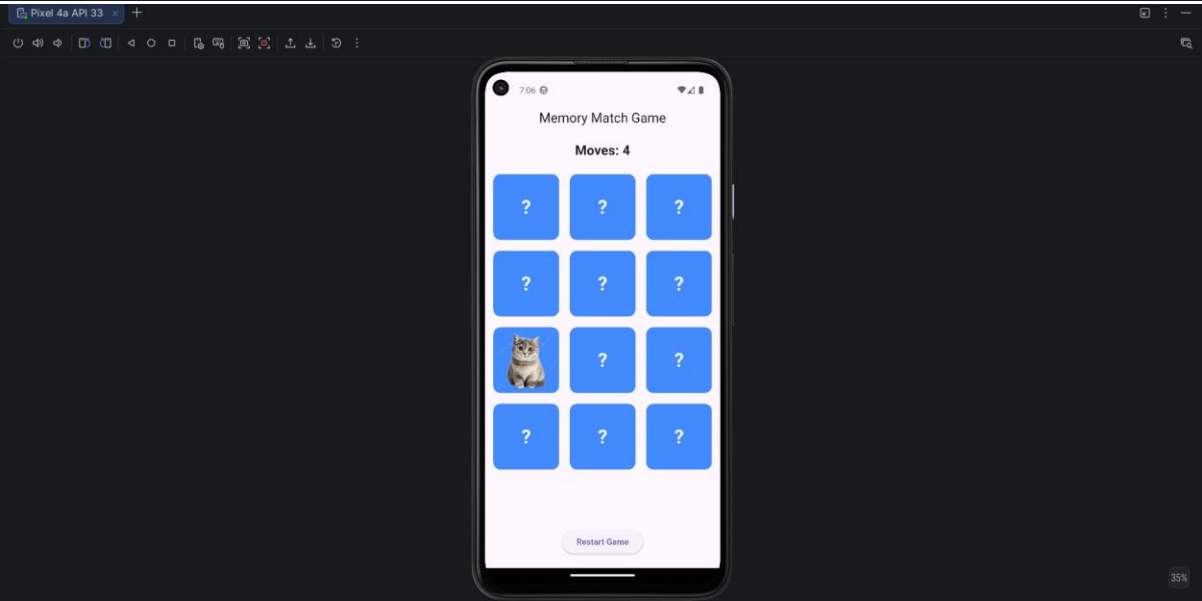

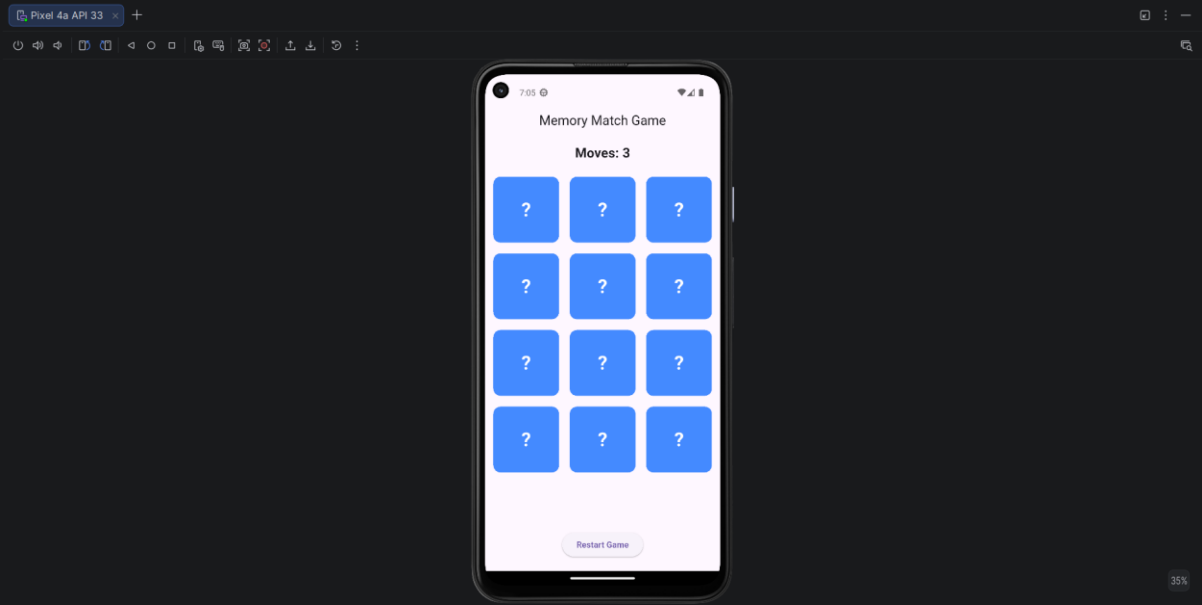

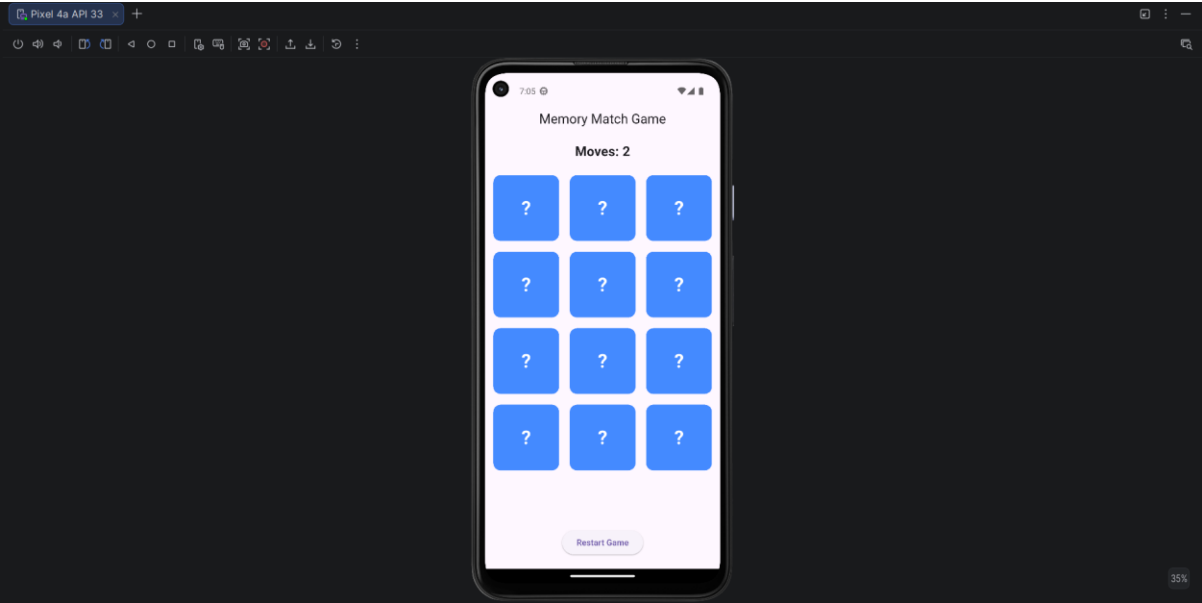

6. GAME FLOW

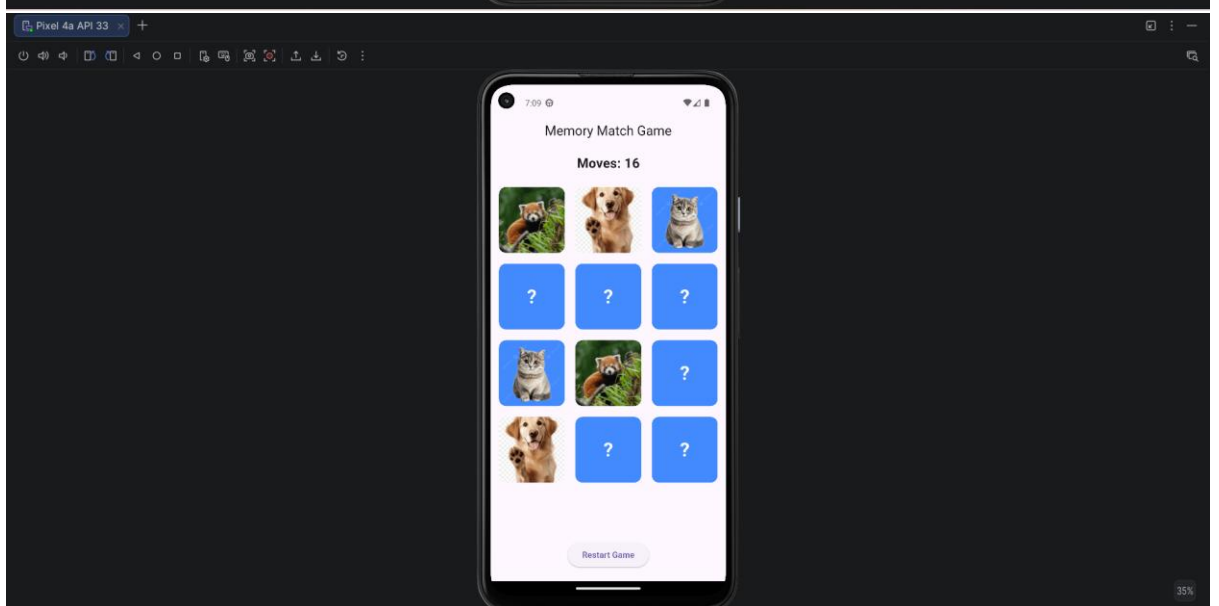

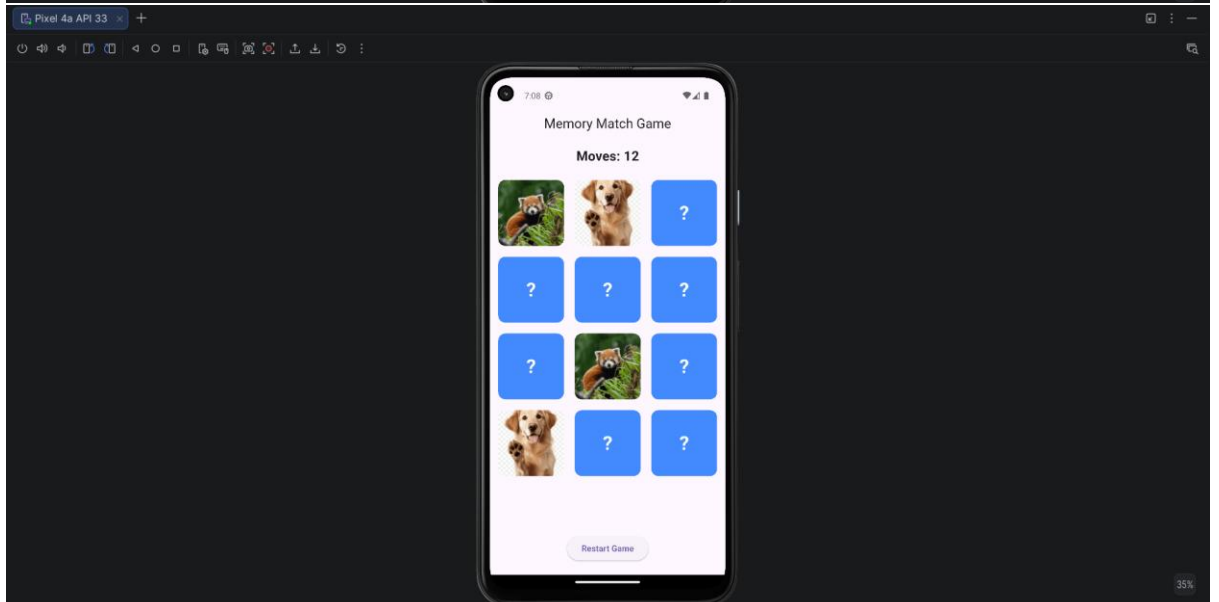

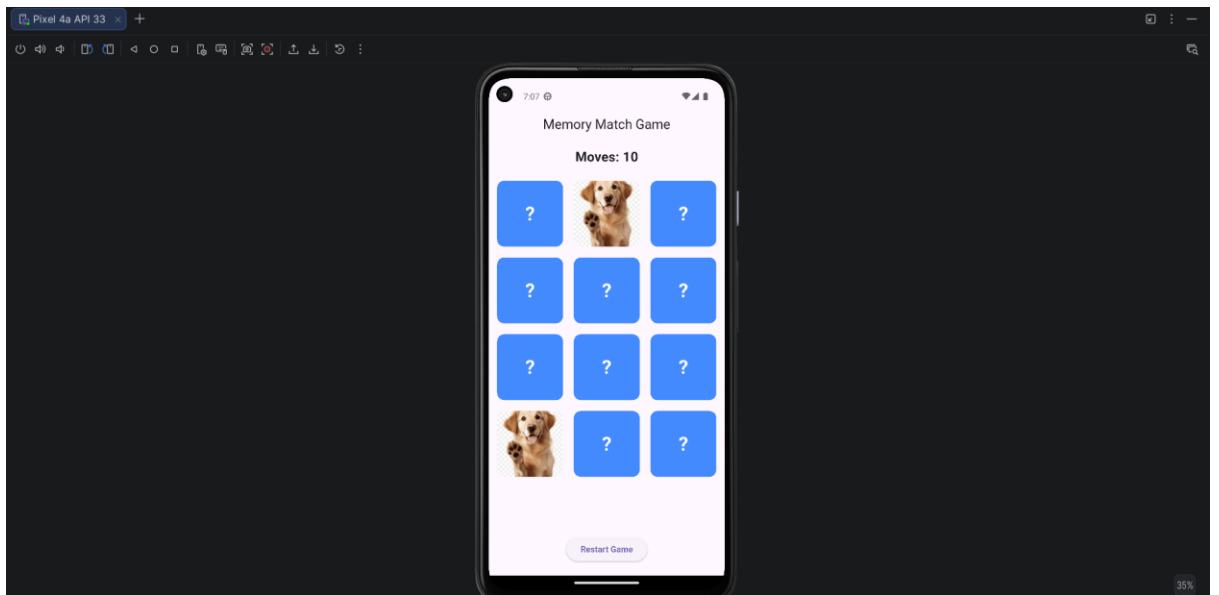

1. User taps a card.
2. Card flips and shows image.
3. User taps second card.
4. If cards match, they remain visible.
5. If cards do not match, they flip back.
6. Moves counter updates.
7. User can restart the game anytime.
